

# Workshop on Memory and Storage Systems

## WoMS 2017

The goal of Workshop on Memory and Storage Systems (WoMS 2017) is to bring together academic researchers and industry practitioners to share their insights from different perspectives (memory and storage systems design, including but not limited to system software, firmware and architecture) and discuss the problems pertaining to design of memory and storage systems of tomorrow's high performance machines.

WoMS 2017 will feature invited speakers from both industry (**Microsoft Research**, **IBM**) and academia (**IISc**, **IIT Delhi**, **IIT Kanpur**, **IIT Gandhinagar**) to talk about pressing issues that need to be addressed in these areas and the research that is being done to solve them.

In addition to the talks, the event will have several forums for informal interactions - over coffee, in an open-house style panel discussions about research opportunities in memory and storage systems.

### Deadline for Registrations: 31st October 2017

The target audience for this workshop is senior undergraduate (3rd or 4th year) or early career graduate students who are looking for introduction to research opportunities in the field of memory architectures and software systems. The organizers are looking to select approximately 50 students to attend WoMS 2017.

There is no application fee. Discounted, shared accommodation may be provided at IIT Gandhinagar for selected candidates.
